Press Release January 2009

Jewell Announces New Engineering and Quality Managers

Jewell Instruments is pleased to announce that John Kaliscik has accepted the position of Engineering Manager and Bill Dolloff has accepted the position of Quality Assurance Manager.

John Kaliscik joined the Jewell team with the acquisition of the Lucas-Varity Schaevitz Inertial Sensors product line in 1998. He has played a key role in our Sales department as the sensors' line product manager and application engineer. He brings to the Engineering team a strong project management skill set as well a solid new product introduction background.

Bill Dolloff joined the Jewell team in 2006 as Project Manager for our Boeing contracts. His transition to Quality Manager takes advantage of his military training and experience. During his 12 year tenure as an avionics maintenance inspector in the Marines, he was designated a "full systems QAR" qualifying him to inspect maintenance on aircraft engines and drive systems, hydraulic and flight control systems, avionics, and structural systems.

After his service in the Marines, Bill's vast quality experience was further expanded in private sector roles, including supervising incoming inspection, ISO certification process, supplier engineer monitoring and qualifying vendors, conducting MRB and solving quality production issues.

Jewell is excited about the addition of both men to our management team. Their can-do attitudes and hands-on philosophies are a welcome boost and we look forward to their continued success with Team Jewell!
