

Application:

The moving iron panel meters, DE 48/72/96/144 housed in molded polycarbonate cases are suitable for the measurement of AC currents for frequency range of 15 to 400 Hz and voltages in the frequency range of 15 to 100Hz.

Moving iron meters indicate rms-values practically independent of waveform even of high harmonics. Error of indication may occur for extreme waveforms (e.g. phase gating controls) & for frequencies above 100KHz.

These meters offer several advantages in switch boards and generating set panels. A number of meters can be mounted in a panel cutout mosaic mounting). For CT operated ammeters, dials can be fitted based on CT ratio. Glass and bezel can easily be replaced.

Features:

- Scale Interchangeability
- Near Linear Scale
- Knife edge pointer
- Easily replicable glass and bezel
- Glass filled polycarbonate housing (UL 94 V-0)

Movement:

Moving iron movement has pivots of very high hardness. Movement is suspended between spring loaded saphire jewel and silicon jewel. Movement is critically damped by use of silicon oil.

Accessories:

Safety Terminal Protection

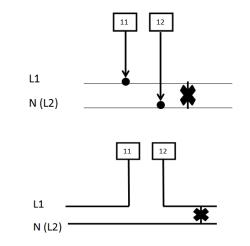

Full sized polycarbonate back cover to provide protection against accidental contact (hand and fingers).

Safety Precautions:

| 1.) | Instruments with damaged bezel or glass must be disconnected from the mains. |
|-----|--|
| 2.) | Adequate safety clearance must be maintained to control panel fasteners and to sheet metal |
| | housing. If non-insulated connector wires are used. |
| 3.) | The back cover must be snapped into place after connector wires have been clamped for |
| | protection against accidental contact. |
| 4.) | Bezel, Scale, and Glass may only be replaced under voltage free conditions. |
| 5.) | Instruments are to be used in grounded panel. |

Connections:

AC Voltage (Direct connected)

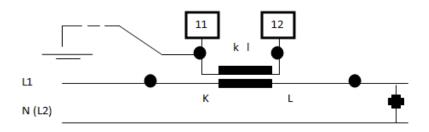

AC Current (Direct connected)

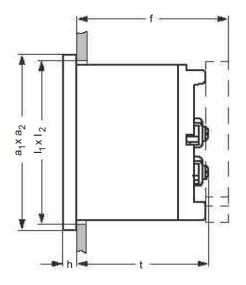

Connections Cont.:

AC Current (for use on current transformer)
